Peer to Peer

Should we expect a lot of requests to/from the Prospector libraries?

The MOBIUS and Prospector systems are set up with a tiered searching, where a patron checks first their local catalog and then the union catalog. The Peer-2-Peer connection will be a new third tier; when a patron on either side has searched their union catalog and is still looking for material they can click on a pass through link that takes them to the other union catalog. They can search and place requests, but the requests are processed through their home system.
