Non-III Libraries (DCB)

How can we make certain items on a bibliographic record non-requestable through Prospector?

If these items are part of a collection and that is indicated in the appropriate subfield of the item record, usually a 9xx field, it should be possible to map this collection type to a non-requestable status. It may be possible to create the items on the DCB server so that they will be loaded to Prospector as non-requestable.
